

Cladding Bricks

Sandy Engineer Cladding

Terracotta Red

Code

CSE-1

Specifications

Length	Thickness (T)	Height	Water Absorption
218 mm	68 mm	21 mm	< 12%

Cladding is made from special type of Terracotta clay . By using natural specific clay it produce red orange cladding. Cladding bricks are the most chosen type of bricks and have been the façade material of demand across the world for thousands year. Facing bricks are primarily used for the interior & external walls of a building and so are generally chosen for their aesthetic qualities.

Features

- Random Colour Variance
- Excellent Strength
